

## Art Panel Installation Instructions

### **SUPPLIED HARDWARE:**

Each panel comes with two sawtooth hangers pre-installed on the back. You should also receive two screws and two wall anchors to easily mount your panels on any flat wall surface.

**TOOLS NEEDED:** Tape Measure, Drill, Level, Pencil

### **STEP 1:**

Before you begin installation, look on the back of the panel and take note of the location of the preinstalled sawtooth hangers. Measure the distance from the center of one of the hangers to the center of the other. (Figure C) Use a pencil and a level to mark that same distance on the wall where you want to hang your panel.

### **STEP 2:**

Install the included wall anchors and screws at the points you marked on the wall. (We recommend drilling pilot holes and using the wall anchors, regardless of the type of wall surface.) Make sure that the heads of both screws remain about 1/8" out from the wall surface.

### **STEP 3:**

Mount the panel by gently sliding the hangers on the back of it over the tops of both screws in the wall, and make sure the panel is secure on both sides.
